

ResinPak

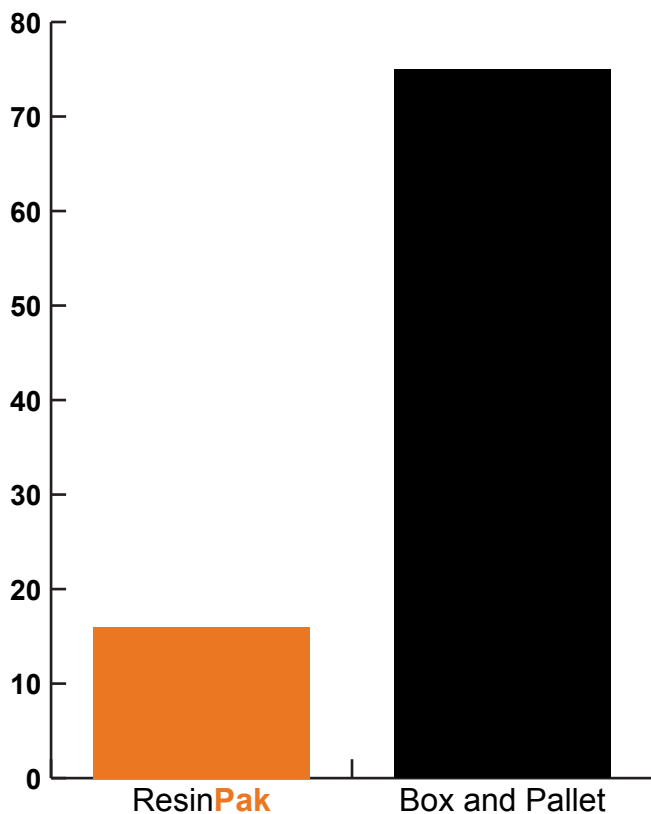

Environmental Benefits Fact Sheet

- 100% Recyclable
- Reusable
- Reduced Freight to Recycler/Landfill
- Reduces Freight for Shipping Product
- Meets or Exceeds all ISPM 15 Requirements
- No Pallet Disposal Issues

Reduce, Reuse, Recycle, ResinPak

Package Weight/Unit

Reduce, Reuse, and Recycle, are the hallmarks of an environmentally friendly program. The ResinPak addresses each of them better than the box and pallet.

The ResinPak weighs a fraction of what the box and pallet weighs and carries more resin. This combination reduces the energy needed to deliver the packaging. Because the packaging weighs less, you can ship more resin on every truck which again reduces the energy used.

Boxes are susceptible to moisture, shortening their lifespan. ResinPak's plastic construction makes it impervious to moisture and has the added benefit of meeting ISPM 15 requirements.

While boxes are recyclable, their higher weight and lack of compressibility makes them more expensive to ship to a recycler. Since pallets cannot be recycled, they normally end up discarded. ResinPaks are 100% recyclable and are significantly less costly in terms of energy and money to ship to be recycled.

ResinPak, better you, better for the environment.

ResinPak will dramatically reduce your costs. Call us today to schedule *your* trial!
